

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicants:	Richard H. ffrench-Constant et al.	
Serial No.:		Group
Filed:		Examiner:
For:	DNA SEQUENCES FROM <i>PHOTORHABDUS LUMINESCENS</i>	
Docket No.:	61,645B DIV1	

Mail Stop PATENT APPLICATION  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

**INFORMATION DISCLOSURE STATEMENT  
UNDER 37 CFR 1.97(C)**

Applicants submit herewith patents, publications or other information of which they are aware, which they believe may be material to the examination of this application and in respect of which there may be a duty to disclose.

The accompanying form PTO 1449 (modified) identifies patents and publications submitted herewith. Copies of the cited references are supplied herewith.

With respect to reference AA, the Examiner's attention is directed to bases 31398-35838 of SEQ ID NO: 11 (orf2), to SEQ ID NO: 14, to column 12, lines 33-49, and to Example 18. Applicants' nucleic acid, tcdB, is distinctly different from orf2 of the reference (89.9% identical), and applicants' protein, TcdB, is distinctly different from the protein encoded by orf2 (SEQ ID NO: 14 of AA)(92.9% identical).

The relevance of references BA and BB is described in the specification.

With respect to item CA, on information and belief, the presentation, of which the reference is an abstract, included information on the effect of using genes xptB1 and xptC1 with the xptA1 gene similar to the information disclosed in reference CB, i.e. that genes xptB1 and xptC1 are needed for full activity of xptA1. Reference CB is not itself prior art. Both CA and CB relate to *Xenorhabdus* toxins, not *Photorhabdus* toxins, and Applicants' nucleic acid, tcdB, is distinctly different from both xptB1 (35.9% identical) and xptC1 (44.7% identical).

Respectfully submitted,

Donald R. Stuart
